

SRRV Service Platform User Manual

*An end-to-end guide — from account creation and consultation,
through payment, to administrative approval.*

WHAT THIS COVERS

DOCUMENT	User Manual & Operating Guide
SYSTEM	Special Resident Retiree’s Visa (SRRV) Service Platform
AUDIENCE	Applicants (clients), Administrators, Super Administrators
PREPARED FOR	Client turnover / handover
BASIS	Application behaviour as implemented on branch <code>develop</code>
DATE ISSUED	26 August 2026
REVISION	1.0

1. About This Manual

1.1 Purpose and audience

This manual describes how to use the SRRV Service Platform from the very first click to the final approval of an application. It is written for three groups of readers:

- **Applicants** — foreign retirees applying for a Special Resident Retiree's Visa. Read Part A.
- **Administrators** — staff who review consultations, documents, payments and applications. Read Part B.
- **Super Administrators** — the owner account that creates and controls admin accounts. Read Part C.

Sections 7 to 10 are reference material for all readers, and are the sections that support staff will use most often once the system is live. Appendix D collects a small number of housekeeping items intended for the technical team rather than for day-to-day users.

1.2 How to read the rules boxes

Throughout the manual, three kinds of boxes appear. They describe conditions that the software enforces — not suggestions. If a condition is not met, the system refuses the action and shows the message quoted in the box.

Rule. A condition the system checks and enforces. Example: a consultation can only be accepted after the consultation fee has been paid.

Note. Helpful behaviour worth knowing — such as the application form saving your progress if the browser tab is closed.

Caution. An action that cannot easily be undone, or a state that locks a record so it can no longer be edited.

2. System Overview

2.1 What the platform does

The SRRV Service Platform is a web portal that carries a retiree's visa application from first enquiry to approval. It replaces e-mail-and-spreadsheet handling with a single record per applicant: one consultation, one application, a set of uploaded documents, and a payment history — all visible to both the applicant and the staff who process it.

The public part of the site (Services, Packages, FAQs, About, Contact) is open to anyone. Everything else sits behind a login and is restricted by role.

2.2 The three portals and who may enter them

A user's role decides which portal they land in after logging in, and the system actively blocks entry to the other portals. Attempting to open a portal you do not belong to silently redirects you back to your own dashboard.

Role	Landing page after login	What the role can do
Applicant Created by self-registration	/applicant/dashboard	Request a consultation, pay fees, submit and edit their own SRRV application, upload and re-upload documents, view receipts and notifications, edit their profile.
Admin Created by a Super Admin	/admin/dashboard	Review all consultations, applications, documents and payments; change statuses; maintain client profiles and service packages.
Super Admin Provisioned in the database	/super-admin/dashboard	Everything an Admin can do, plus creating, disabling and deleting admin accounts, and viewing the full client register.

Rule — access control. Visiting any page under /applicant , /admin or /super-admin without being logged in redirects you to the login page, remembering where you were headed so you are returned there after signing in.

Rule — disabled admins. An admin whose account has been de-activated by the Super Admin cannot log in. The attempt is refused and the session is signed out immediately.

2.3 The end-to-end journey at a glance

Every applicant follows the same sequence. Each arrow below is a gate: the next step only becomes available when the previous one is complete.

#	Stage	Who acts	Gate that must be satisfied to move on
1	Register an account	Applicant	E-mail address must be confirmed via the link sent by e-mail.
2	Log in	Applicant	Confirmed account; correct password.
3	Request a consultation	Applicant	Preferred date, mode of communication and purpose supplied.
4	Pay the consultation fee (₱50)	Applicant	Payment must reach success at the payment gateway.

#	Stage	Who acts	Gate that must be satisfied to move on
5	Accept the consultation	Admin	Admin cannot accept until the consultation fee is paid.
6	Submit the SRRV application	Applicant	The consultation must be accepted ; all required fields and required documents supplied.
7	Pay the application fee (₱300)	Applicant	Payment must reach success .
8	Review each document	Admin	Every document must be marked accepted .
9	Approve the application	Admin	Five separate pre-conditions — see section 7.6.

3. Before You Begin

3.1 Requirements

Item	Requirement
Web browser	Any current desktop or mobile browser (Chrome, Edge, Safari, Firefox). The portal is responsive and usable on a phone, though the application form is more comfortable on a laptop.
E-mail address	Mandatory and must be reachable — the account cannot be used until the confirmation link is clicked. One account per e-mail address.
Documents	Digital copies (scan or clear photograph) of the documents listed in section 7.5, saved as PDF, JPG, JPEG, PNG, GIF, BMP, WEBP, TIFF or TIF.
Means of payment	Any method offered on the hosted checkout page (e-wallet, card, bank transfer, over-the-counter and similar, depending on what is enabled for the merchant account).
Currency	All charges are in Philippine Pesos (PHP).

3.2 Fees charged by the platform

Two fees are collected inside the portal. They are separate transactions with separate receipts, and each is tied to a different stage of the journey.

Fee	Amount	When it is charged	What it unlocks
Consultation fee	₱50.00	Immediately after the consultation request form is submitted.	Allows staff to process and accept the consultation request.
Application fee	₱300.00	Immediately after the SRRV application form is submitted.	Is a pre-condition for the application to be approved.

Note. These two amounts are the platform's own service charges. Government and third-party costs — medical examination, police clearance, Bureau of Immigration clearance, the PRA visa deposit and so on — are paid outside the portal, and proof of those payments is uploaded as part of the document checklist.

Caution. The portal permits only *one active payment per applicant per fee type*. If a checkout is abandoned and later retried, the earlier unpaid invoice is cancelled automatically so the same fee can never be charged twice.

Part A — The Applicant’s Journey

Sections A1 to A13 follow one applicant from an empty browser window to an approved application. Follow them in order; the platform will not let you skip ahead.

A1. Creating an account (Register)

- 1 Open the site and choose **Register** (direct address: `/register`).
- 2 Complete every field of the registration form. The rules the system applies are listed in the table below.
- 3 Choose a password of at least eight characters and repeat it in **Confirm password**.
- 4 Submit the form. You are taken to a confirmation-pending page and an e-mail is sent to the address you entered.

Field	Required	Rule enforced
First name	Yes	At least two characters; must not contain digits. Capitalisation is normalised automatically.
Surname	Yes	At least two characters; must not contain digits.
Suffix	No	Free text (Jr., III, and similar). Appended to the display name after a comma.
E-mail	Yes	Must be a valid address and must not already belong to a confirmed account.
Sex	No	Male or female.
Birthday	Yes	Used to calculate your age automatically; you never type an age.
Nationality	Yes	Stored with normalised capitalisation.
Phone number	Yes	Must not be blank.
Password	Yes	Minimum of eight characters.
Confirm password	Yes	Must match the password exactly, otherwise “Passwords do not match”.

Rule — duplicate e-mail addresses. If the address already belongs to a *confirmed* account, registration is refused with “An account with this email already exists.” If it belongs to an account that was never confirmed, the system quietly re-sends the confirmation link instead of refusing, and takes you to the confirmation page.

A2. Confirming your e-mail address

- 1 Open the e-mail from the platform and click the confirmation link. Check the spam folder if it has not arrived within a few minutes.
- 2 The link returns you to the site, verifies the account and signs you in.
- 3 If the link has expired or was lost, return to the confirmation page and request that it be re-sent.

Rule. Logging in before confirming does not fail with an error — the system re-sends the confirmation e-mail and returns you to the confirmation-pending page. The account stays unusable until the link is clicked.

A3. Logging in

- 1 Go to `/login` and enter your e-mail address and password.
- 2 Submit. The system identifies your role and sends you to the matching dashboard — applicants to `/applicant/dashboard`.

Note. If you tried to open a protected page before logging in, you are returned to that page automatically after a successful sign-in.

A4. Forgotten password

- 1 On the login page choose **Forgot password** and enter your registered e-mail address.
- 2 If the address is not on file the system replies “No account found with this email.” — no e-mail is sent.
- 3 If it is on file, a reset link is e-mailed to you. Click it; you are taken to the change-password page with an active session.
- 4 Enter a new password of at least eight characters and save. You are returned to the login page to sign in with the new password.

Caution. The reset link creates a temporary session. If you leave the page without setting a new password, request a fresh link — the message “No active session. Please request a new password reset link.” means the link has already lapsed.

A5. The applicant dashboard

The dashboard at `/applicant/dashboard` is the home screen for everything that follows. It shows, in one view:

- **Application status and code** — the reference beginning `SRRV-` that identifies your file.
- **Progress of the review** — where the application currently sits.
- **Your documents** — each with its own review status, and a re-upload control on any document that needs attention.
- **Payments** — the consultation payment and the application payment, each with amount, method, transaction code and status; a **Retry payment** button appears when a fee is still unpaid.
- **Your concierge contacts** — the active staff members assigned to help you.

The left-hand menu gives access to **Dashboard**, **Consultation**, **Application**, **Receipts** and **Profile**, with a bell icon for notifications.

A6. Requesting a consultation

The consultation is the compulsory first step: no application may be started until a consultation has been requested, paid for and accepted by staff.

- 1 Open **Consultation** in the menu (`/applicant/consultation`).
- 2 Select a **mode of communication**: Zoom, Google Meet, WhatsApp call, phone call, or a face-to-face meeting.
- 3 Choose a **preferred date**. Earlier dates cannot be selected — the date must be today or later.
- 4 Describe the **purpose** of the consultation in the free-text box. It must not be empty.

- 5 Press **Submit Request**. The request is saved, staff are notified by e-mail and in the portal, and you are sent straight to the secure checkout page to pay the ₱50 consultation fee.

Rule — one consultation per applicant. Each account holds a single consultation record. Submitting the form again updates that record rather than creating a second one; the button then reads **Update Consultation**.

Caution — the record locks. Once staff move your consultation to **processing** or **accepted**, the form is replaced by a read-only notice and no further edits are possible. Editing is only available while the consultation is **pending** or **rejected**.

A7. Paying the consultation fee

- 1 After submitting the consultation you are redirected automatically to the hosted checkout page of the payment provider.
- 2 Choose a payment method and complete the payment there. The portal never sees or stores your card or wallet details.
- 3 On success you are returned to a receipt page showing the transaction code, date, description, amount and a **Paid** mark.
- 4 Choose **Return to Dashboard** to continue.

Note. When you merely edit an already-paid consultation, no new invoice is raised — you are returned to the dashboard with a success message. A fresh invoice is created only when the previous payment did not succeed.

A8. Payment outcomes and retrying

Outcome	What you see	What to do
success	Receipt page, and the payment appears as paid on the dashboard.	Nothing. Wait for staff to act on your consultation.
pending	Checkout was opened but never completed.	Use Retry payment on the dashboard. The unpaid invoice is cancelled and a new one is issued.
failed	Failure page; the invoice expired or was declined.	Use Retry payment .
cancelled	The payment was voided.	Use Retry payment .

Rule — no double charging. Retrying is refused with “Payment has already been completed” if a successful payment for that fee already exists. Whenever a retry is allowed, any older unpaid invoice is expired first, so a stale checkout page left open in another tab can no longer be paid.

A9. Waiting for the consultation decision

Staff review the request and set one of three outcomes. You are informed both by e-mail and by an in-portal notification, and the consultation page reflects the change.

Decision	Meaning for you
processing	Staff have taken up your request and are arranging the meeting. The form is now locked.
accepted	Your consultation is confirmed. This is the moment the SRRV application form unlocks.
rejected	The request was declined. You may edit the consultation and submit it again.

Rule. Attempting to open the application form before your consultation is accepted shows “Consultation Required” (if you have never requested one) or “Consultation Submitted” (if one is awaiting a decision), with a button leading back to the consultation page.

A10. Filling in the SRRV application

The application at </applicant/application> is a five-step form. Steps 1 to 3 collect information, step 4 is a review of everything you entered, and step 5 is the read-only view of a submitted application.

Step	Name	What it collects
1	Personal Details	Name, birthday, place of birth, sex, religion, citizenship, civil status, height and weight; passport number, place and date of issue and validity; entry-visa details; educational history; employment history; your future plans in the Philippines.
2	Contact Information	E-mail, mobile, telephone and fax; home-country address; primary and secondary Philippine addresses; parents' names and ages; dependants to be included; emergency contact.
3	Document Checklist	Upload of each required and optional document (section 7.5).
4	Review Application	A full read-back of steps 1 to 3 before submission.
5	Under Review	The submitted application as staff see it, with an Edit option where permitted.

FIELD RULES WORTH KNOWING BEFORE YOU START

Field	Rule enforced
Names, citizenship, place of issue, parents' and emergency-contact names	Must not contain digits.
Birthday	Must be a date in the past.
Passport number	5 to 20 characters, capital letters and digits only.
Passport validity	Must be later than today — an expired passport, or one expiring today, is refused. The date of issue must fall before the expiry date.
Mobile number	10 to 15 digits, numerals only.
Telephone / fax / emergency phone	Optional; when supplied, 7 to 15 digits.
E-mail	Valid address, at most 254 characters.
Education and employment rows	Each row is all-or-nothing: leave it entirely blank, or fill every field in it. The “from” date must precede the “to” date, and the “to” date cannot be in the future.
Dependants	Each row is all-or-nothing: full name, relationship, age and passport number together, with the passport number in the same 5–20 character format.
Date of arrival	Cannot be in the past.
Tourist-visa expiry	Must be later than today.
Future plans	Tourism, investment, employment or others. Choosing “others” requires you to describe them.

- 1 Work through steps 1 and 2, pressing **Save & Continue** at the foot of each. Errors are shown beneath the offending field and the form will not advance until they are cleared.
- 2 At step 3, upload each document. Accepted file types are PDF, JPG, JPEG, PNG, GIF, BMP, WEBP, TIFF and TIF.
- 3 At step 4, read the summary carefully and use **Back** to correct anything that is wrong.
- 4 Press **Submit Application**. A confirmation dialogue appears — confirm to proceed, or choose **Review Again**.
- 5 The application is saved with a reference code of the form **SRRV-...**, staff are notified, and you are taken to the checkout page for the ₱300 application fee.

Note — your progress is saved. Entries and uploaded files are held in the browser as you type, so closing the tab by accident does not lose your work. Reopening the form restores the step you were on.

Rule — missing documents send you back. If a required document is missing when you try to submit from step 4, the form jumps back to step 3 and marks what is missing.

A11. Paying the application fee

- 1 You are redirected to the hosted checkout page immediately after submission.
- 2 Pay ₱300 by any offered method. A receipt page confirms the transaction on success.
- 3 If you abandon or fail the payment, open the dashboard and use **Retry payment** in the payment card. The rules in A8 apply identically.

Caution. An application is never approved while its fee is unpaid. Staff are blocked from approving it, so an unpaid fee stalls the entire file.

A12. Following the review and re-uploading documents

Staff examine each document individually and may attach a note explaining a decision. Your dashboard shows the status of every document.

Document status	What it means and what to do
pending	Uploaded and waiting to be examined. Nothing to do.
processing	Currently being checked. Nothing to do.
accepted	Approved. No further action.
rejected	Not acceptable. Read the reviewer's note and upload a corrected file.
action need	Something must be fixed or supplied. Read the note and re-upload.

- 1 On the dashboard, find the document marked *rejected* or *action need* and choose the re-upload control.
- 2 Select the corrected file. The old file is removed and replaced.
- 3 The document returns to **pending** and re-enters the review queue.

The application itself moves through its own statuses, and each change reaches you as a notification and an e-mail:

Application status	Meaning
pending	Submitted and awaiting review. This is the state in which you may still edit and re-submit.
processing	Under active review by staff. Editing is closed.
paused	Review has been suspended pending something from you or from a third party.
payment_failed	The application fee did not go through. Retry the payment from the dashboard.
rejected	Declined. You may edit the application and submit it again.
approved	Approved. The record shows who approved it and when.

Rule — when editing is possible. An application can only be edited while it is **pending** or **rejected**. At any other status the attempt is refused with “Your application cannot be modified at this stage.” Re-submitting an edited application returns it to *pending*.

A13. Notifications, receipts and profile

- **Notifications** (bell icon, or </applicant/notifications>) — every consultation and application status change is recorded here and links to the page it concerns. Items can be marked as read, individually or all at once, and cleared.
- **Receipts** (</applicant/receipts>) — the full payment history: transaction code, amount, method, type of fee and status, newest first. Individual receipts can be reopened.
- **Profile** (</applicant/profile>) — name, sex, birthday, nationality and civil status. Your age is recalculated from the birthday whenever you save. Names and nationality must not contain digits.

Part B — The Administrator's Journey

Part B describes the staff side of the same journey: the queues, the decisions available at each stage, and the conditions the system enforces before it will let a decision be recorded.

B1. Signing in and the admin dashboard

Admins sign in at the same `/login` page as applicants and are routed to `/admin/dashboard`. The sidebar offers **Dashboard, Client Profiles, Consultations, Applications, Payments, Documents** and **Services**.

The dashboard summarises the whole operation: applications by status, revenue collected and revenue by month, payments succeeded, pending and refunded, documents awaiting review, consultations by status, total registered users, and lists of the most recent applications, consultations and pending documents.

B2. Consultations queue — accepting or rejecting

- 1 Open **Consultations**. The header shows counts of total, pending, processing, accepted and rejected requests.
- 2 Filter by status or search by the applicant's name; results are paginated ten to a page, newest first. A badge marks consultations that already have an application attached.
- 3 Open a request to see the applicant's name and e-mail, preferred date, mode of communication, purpose, the consultation payment, and the linked application if one exists.
- 4 Set the status to **Processing, Accepted** or **Rejected**.

Rule — payment first. A consultation cannot be set to *processing* or *accepted* until its ₱50 fee has been paid. The attempt is refused with “Cannot accept: the consultation fee has not been paid yet.” Rejecting is always available.

Note. Accepting stamps the record with your identity and the time of acceptance, and the detail page then shows “Accepted by ...”. If the consultation is later moved out of *accepted*, that stamp is cleared.

Caution. Accepting a consultation is what unlocks the SRRV application form for that applicant. Do not accept until the consultation has genuinely taken place or been agreed.

B3. Applications queue — reviewing and approving

- 1 Open **Applications**. Counts of total, paused, pending, approved and rejected are shown at the top.
- 2 Filter by status, or search by applicant name or application code.
- 3 Open an application to see the complete file: personal details, passport, entry visa, education, employment, dependants, family background, contact and emergency contact, the linked consultation, the application payment, and every uploaded document.
- 4 Review each document (section B4) before deciding on the application as a whole.
- 5 Set the application status. Every change notifies the applicant in the portal and by e-mail.

Rule — five conditions must hold before an application can be approved. The system checks each in turn and names the first one that fails:

1. Contact details are complete — mobile number and home-country address are both present.
2. A successful *application* payment exists (the consultation fee does not count).
3. Every uploaded document carries the status *accepted*; otherwise it reports how many are outstanding.
4. The applicant profile section of the application is present.
5. Passport information is present.

Rule — setting an application to *processing* requires the mobile number and home-country address to be present.

Note. Approving stamps the file with the approver and the timestamp; both are cleared if the application later leaves the approved state. Setting a status to the value it already holds is ignored, so the applicant is never sent a duplicate notification.

B4. Document review

Documents can be reviewed either inside an application, or in bulk from the **Documents** queue, which lists every uploaded file across all applications with counts by status.

- 1 Open the document to view it. Viewing generates a temporary secure link that expires after one hour.
- 2 Set its status: **pending**, **processing**, **accepted**, **rejected** or **action need**.
- 3 When rejecting or asking for action, write a review note. The applicant reads this note and it is the only guidance they receive.
- 4 Where several documents share the same outcome, select them and apply the status in one operation.

Note. When an applicant re-uploads, the replacement file overwrites the old one and the status returns to *pending*, so it reappears in your queue.

B5. Payments monitoring

The **Payments** page lists every transaction with the client's name, amount, status, method, transaction code, fee type and date, newest first. Filters cover status, method and fee type, and you can search by transaction code, client name or method. Summary figures show total revenue, revenue split between application and consultation fees, counts of successful and pending payments, and the number and value of refunded (cancelled) payments.

Note. Payment records are written by the payment provider's callback, not by hand. Statuses on this page are a reflection of the gateway, which is why there is no control to edit them.

B6. Client profiles

Client Profiles is the client register: name, sex, birthday, nationality, age, civil status, and the state of that client's application. Opening a client shows their full record including the approved-application detail where it exists. Admins may correct profile details (the no-digits rules apply here too), return an application to *pending* so it can be reviewed again, and set the application status directly from the client's record.

B7. Services and packages

The **Services** page maintains the service plans shown to the public on the Services and Packages pages. Admins can create a plan, edit it, delete it, mark one plan as featured, and switch a plan's availability on or off. Changes appear on the public site.

B8. Admin notifications

The bell icon collects staff notifications. Two events raise them, and they are sent to every *active* admin:

- A new or updated consultation request — linking to the consultations queue.
- A new or re-submitted application — linking to that applicant's application.

Notifications can be marked read individually or all at once, and cleared. The same two events also generate e-mails to the administrative mailbox, as does a paid consultation fee.

Part C — The Super Administrator

The Super Admin account owns the system. It can do everything an admin can do, and is the only role that can create or remove admin accounts.

C1. Dashboard

Signing in as Super Admin lands on `/super-admin/dashboard`, with menu entries for **Dashboard**, **Admins** and **Clients**.

C2. Managing admin accounts

On **Admins** (`/super-admin/manage-admins`) every admin is listed with name, e-mail address, whether the account is active, whether the e-mail has been confirmed, and the date it was created.

CREATING AN ADMIN

- 1 Choose **New Admin** and enter the name, e-mail address and an initial password.
- 2 Submit. All three fields are required and the password must be at least eight characters.
- 3 The account is created as active, and a confirmation e-mail is sent. The message “Admin created. They need to check their email to confirm their account.” confirms this.
- 4 The new admin clicks the link in that e-mail, then signs in at `/login`.

Rule. If the e-mail address already belongs to a confirmed user, creation is refused with “A user with this email already exists.” If it belongs to an unconfirmed user, that account is updated with the new password and name and the confirmation e-mail is sent again.

DISABLING AND DELETING ADMINS

- **Disable** — switch the account to inactive. The person can no longer log in, stops receiving staff notifications, and no longer appears to applicants as a concierge contact. The account and its history are retained, and it can be switched back on at any time.
- **Delete** — removes the admin profile and the underlying login permanently.

Caution. Deletion cannot be undone. Where a member of staff has simply left or is temporarily away, disable the account rather than deleting it.

C3. Viewing client accounts

Clients (`/super-admin/manage-clients`) is a read-only register of every applicant: name, e-mail, nationality, sex, age, civil status, the status and code of their application, and the date they registered.

7. Reference — Statuses, Rules and Conditions

7.1 Consultation statuses

Status	Set by	Effect
pending	Applicant (on submit)	Awaiting staff. The applicant may still edit and re-submit.
processing	Admin	Locks the consultation form. Requires the fee to be paid.
accepted	Admin	Locks the form and unlocks the SRRV application. Requires the fee to be paid. Records approver and time.
rejected	Admin	The applicant may edit and re-submit the request.

7.2 Application statuses

Status	Editable by applicant	Notes
pending	Yes	The state on first submission and on re-submission.
processing	No	Requires mobile number and home-country address to be present.
paused	No	Review suspended.
payment_failed	No	The application fee did not complete.
rejected	Yes	The applicant can correct and re-submit.
approved	No	All five pre-conditions in 7.6 were satisfied. Approver and time recorded.

7.3 Document statuses

Status	Applicant must act?	Notes
pending	No	Awaiting review; also the status after any re-upload.
processing	No	Being checked.
accepted	No	Counts towards the approval pre-condition.
rejected	Yes — re-upload	A review note should explain why.
action need	Yes — re-upload	Something is missing or must be corrected.

7.4 Payment statuses

Status	Meaning
pending	An invoice exists but has not been paid. Retrying is allowed.
success	Paid and confirmed by the gateway. Blocks any further invoice for that fee.
failed	Expired, declined, or superseded by a retry.
cancelled	Voided; counted as refunded in the admin statistics.

Status	Meaning
processing	Transitional state supported by the data model.

7.5 Documents checklist

#	Document	Required	Description
1	Original passport	Yes	With valid tourist-visa entry stamp.
2	2×2 photo	Yes	Recent colour photograph on a white background.
3	PRA application form	Optional	Duly accomplished SRRV application form.
4	Medical examination report	Yes	From a licensed physician.
5	Police clearance	Yes	From the country of origin or last residence; NBI clearance is required for stays in the Philippines longer than 90 days.
6	Bureau of Immigration clearance (BICC)	Yes	Official clearance certificate.
7	Bank certificate / inward remittance	Yes	Proof of the required visa deposit in an accredited bank.
8	Processing and annual fees	Yes	Receipt or proof of payment of application fees.
9	Proof of pension	Optional	Official document proving a monthly pension, where the chosen SRRV option requires it.
10	Proof of relationship	Optional	Marriage certificate, birth certificate or household registry for each dependant.

Accepted file types: PDF, JPG, JPEG, PNG, GIF, BMP, WEBP, TIFF, TIF. DOC and DOCX are additionally accepted when re-uploading a document from the dashboard. Files are stored privately and are only reachable through a temporary link.

7.6 Approval pre-conditions, in one place

Action	Conditions that must all hold
Applicant submits an application	Their consultation exists and is <i>accepted</i> ; every required field passes validation; every required document is attached.
Applicant edits an application	Its status is <i>pending</i> or <i>rejected</i> .
Applicant edits a consultation	Its status is <i>pending</i> or <i>rejected</i> .
Admin sets a consultation to <i>processing</i> or <i>accepted</i>	The consultation fee is paid.
Admin sets an application to <i>processing</i>	Mobile number and home-country address present.
Admin approves an application	Contact details present; application fee paid; all documents accepted; applicant profile present; passport present.
Applicant retries a fee	No successful payment exists yet for that fee.

8. How Payments Work Behind the Scenes

This section is for the staff who will answer payment questions. It explains why the portal behaves as it does when a payment goes wrong.

8.1 The path of a payment

- 1 The applicant submits a consultation or an application.
- 2 Before anything is charged, the portal checks that its own payment callback and its success and failure pages are reachable. If they are not, no invoice is created and the applicant is told “Payment processing is unavailable... Please contact support.” This prevents a payment being taken that the portal could not then record.
- 3 Any earlier unpaid invoice for the same fee is expired and marked failed.
- 4 A payment record is written with a unique transaction code beginning `srrv-` and the status *pending*.
- 5 An invoice is raised with the payment provider and the applicant is redirected to the hosted checkout page.
- 6 When the payment concludes, the provider calls back to the portal, and that callback — not the applicant’s browser — is what sets the final status. A payment marked *paid* becomes *success*; expired or failed invoices become *failed*.

8.2 The safeguards

Safeguard	What it prevents
One active payment per applicant per fee	Two open or two successful invoices for the same fee cannot exist at the same time.
Old invoices expired before a retry	A checkout page left open in another tab cannot be paid after a new invoice is issued.
Only pending payments are updated by the callback	A late “expired” message cannot downgrade a payment that already succeeded.
Duplicate success detection	If a second invoice is somehow paid, it is recorded as failed rather than counted twice in revenue.
Signed callback	Callbacks that do not carry the agreed secret token are rejected outright.

Note for support staff. Because the final status comes from the provider’s callback, a payment can briefly appear as *pending* on the dashboard even though the applicant has just paid. Refreshing after a few moments is the correct advice; a payment that is still pending after several minutes should be checked against the provider’s own dashboard using the transaction code.

9. Notifications and E-mails Sent by the System

Event	In-portal notification	E-mail
Consultation requested or updated	To every active admin	To the administrative mailbox
Consultation fee paid	—	To the administrative mailbox, with the payment details

Event	In-portal notification	E-mail
Consultation accepted, rejected or set to processing	To the applicant	To the applicant
Application submitted or re-submitted	To every active admin	To the administrative mailbox
Application status changed	To the applicant	To the applicant
Registration, e-mail confirmation, password reset	—	To the applicant, from the authentication service

Every outbound e-mail attempt is recorded in an audit log with its recipient, subject, status and any error, for record-keeping. In-portal notifications are best-effort: if a notification or e-mail fails, the underlying action (the submission, or the status change) still completes.

10. Troubleshooting — Messages and What They Mean

10.1 Messages an applicant may see

Message	Cause and remedy
"An account with this email already exists."	The address belongs to a confirmed account. Log in instead, or use the forgotten-password flow.
"Passwords do not match"	The two password boxes differ. Re-type both.
"Password must be at least 8 characters."	Choose a longer password.
"No account found with this email."	The reset was requested for an address that is not registered. Check the spelling.
"No active session. Please request a new password reset link."	The reset link has lapsed. Request a new one.
"Preferred date must be today or in the future"	A past date was chosen for the consultation.
"Your consultation is currently being processed and can no longer be modified."	Staff have moved the consultation to processing or accepted. Contact your concierge for changes.
"Your consultation request must be accepted before you can submit an application."	Wait for the consultation decision. If it has not been paid, pay the fee first.
"Your application cannot be modified at this stage."	The application is no longer pending or rejected. Contact your concierge.
"Payment has already been completed"	The fee is already paid; no second invoice will be issued.
"Payment processing is unavailable... Please contact support."	The portal could not verify its payment callbacks. This is a configuration or connectivity problem — report it to the technical team.
"Passport is expired or expires today"	The passport validity date must be later than today.
"Invalid passport number format"	Use 5 to 20 characters, capital letters and digits only.
"All fields in this row must be filled"	An education, employment or dependant row is partly filled. Complete it or clear it entirely.
"Receipt not found."	The reference in the address does not match a payment. Check the dashboard for the current status.
"Invalid file format. Accepted: PDF, DOC, DOCX, JPG, PNG, GIF, BMP, WEBP, TIFF."	Convert the file and upload again.

10.2 Messages an administrator may see

Message	Cause and remedy
"Cannot accept: the consultation fee has not been paid yet."	Ask the applicant to pay, or to retry the payment from their dashboard.
"Cannot approve: missing required contact fields (Phone Number, Address)"	The application lacks a mobile number or home-country address. Ask the applicant to edit and re-submit.

Message	Cause and remedy
"Cannot approve: no successful payment found"	The ₱300 application fee is unpaid.
"Cannot approve: N document(s) not yet accepted"	Finish reviewing every document first.
"Cannot approve: applicant profile is missing" / "passport information is missing"	The submission is incomplete; have the applicant edit and re-submit.
"A user with this email already exists."	Creating an admin on an address that already belongs to a confirmed user.
Login refused for an admin	The account has been de-activated by the Super Admin. Re-activate it on the Admins page.

10.3 First checks when something looks wrong

1. **An applicant cannot start their application.** Check the consultation: does it exist, is the fee paid, and is it accepted?
2. **An application cannot be approved.** Work down the five conditions in section 7.6 in order.
3. **A payment says pending but the client says they paid.** Wait a moment and refresh; then match the transaction code against the payment provider's dashboard.
4. **A client is not receiving e-mail.** Check the spam folder, confirm the address on the profile, and check the e-mail audit log.
5. **An admin sees nothing in their notification bell.** Only *active* admins receive staff notifications.

11. Appendices

Appendix A — Route map

Address	Who may open it	Purpose
/, /services, /packages, /about, /faqs, /contact	Anyone	Public information pages.
/privacy, /terms, /cookies	Anyone	Legal pages.
/register, /login, /confirm-email	Signed-out visitors	Account creation and sign-in. Signed-in users are redirected to their dashboard.
/applicant/dashboard	Applicant	Status, documents, payments, concierge contacts.
/applicant/consultation	Applicant	Request or update the consultation.
/applicant/application	Applicant	The five-step SRRV application.
/applicant/receipts	Applicant	Payment history.
/applicant/profile	Applicant	Personal details.
/applicant/notifications	Applicant	Status-change notifications.
/applicant/payment/success, /applicant/payment/failed	Applicant	Return pages from the checkout.
/admin/dashboard	Admin, Super Admin	Operational statistics.
/admin/consultations	Admin, Super Admin	Consultation queue and decisions.
/admin/applications	Admin, Super Admin	Application queue, full file view, approval.
/admin/documents	Admin, Super Admin	Document review queue.
/admin/payments	Admin, Super Admin	Payment monitoring.
/admin/profiles	Admin, Super Admin	Client register and records.
/admin/services	Admin, Super Admin	Service plans shown publicly.
/super-admin/dashboard	Super Admin	Overview.
/super-admin/manage-admins	Super Admin	Create, disable and delete admins.
/super-admin/manage-clients	Super Admin	Read-only client register.

Appendix B — Environment configuration

For the technical staff who will run the deployment. These values are set once per environment and are not visible to users.

Setting	Purpose
NEXT_PUBLIC_SUPABASE_URL	Address of the database and authentication service.
NEXT_PUBLIC_SUPABASE_PUBLISHABLE_KEY , NEXT_PUBLIC_SUPABASE_ANON_KEY	Public keys used by the browser and by request routing.
SUPABASE_SERVICE_ROLE_KEY , SUPABASE_SECRET_KEY	Privileged server-side keys. Never expose these.
NEXT_PUBLIC_SITE_URL	Public address of the site; used to build confirmation, reset and payment-return links.
RESEND_API_KEY	Credential for sending e-mail. Without it, e-mails are skipped and logged as skipped.
ADMIN_EMAIL	The administrative mailbox that receives staff e-mails and is used as the sender address.
XENDIT_SECRET_KEY	Credential for raising invoices with the payment provider.
XENDIT_WEBHOOK_TOKEN	Shared secret that authenticates the provider's callbacks. Callbacks without it are rejected.

Appendix C — Glossary

Term	Meaning
SRRV	Special Resident Retiree's Visa, issued by the Philippine Retirement Authority.
PRA	Philippine Retirement Authority, the government agency responsible for the SRRV.
BICC	Bureau of Immigration Clearance Certificate.
NBI clearance	Clearance from the National Bureau of Investigation, required where the applicant has stayed in the Philippines for more than 90 days.
Application code	The reference beginning SRRV - that identifies an application.
Transaction code	The reference beginning srrv - that identifies a single payment.
Concierge	An active administrator shown to the applicant as their point of contact.
Dependant	A family member included in the applicant's SRRV application.
Hosted checkout	The payment provider's own secure page where the payment is actually made.

Appendix D — Notes for the project team

The following items were observed in the delivered build. They do not affect the instructions above, but they should be settled between the client and the development team as part of the handover.

Item	Detail
Fee amounts are fixed in code	₱50 and ₱300 are set in the application source, not in an administrative setting. Changing a fee currently requires a code change and re-deployment.

Item	Detail
“Fill Test Data” button	A development helper is visible on steps 1 and 2 of the application form. It should be removed before the portal is opened to real applicants.
Payment method recorded at creation	Payments are recorded with a provisional method and corrected to the real method when the provider’s callback arrives.
Consultation fee refunds	There is no in-portal refund control. Refunds are handled in the payment provider’s own console; the portal counts cancelled payments as refunded in its statistics.
Diagnostic logging	Some authentication routines still write diagnostic output to the server log. This should be reviewed before production use.

End of manual. Prepared from the behaviour of the delivered application on branch `develop`, 26 August 2026. Where the software is changed after this date, this document should be revised alongside it.
